## BEEF COUNTRY GENETICS

*The Efficiency Breeders*

### Balancing and Understanding Feed Efficiency Indicators

ADG Average Daily Gain, until recent times, has historically been used as an indicator for feed conversion with a fairly high correlation. Problem is, it also increases appetite and frame score, especially when early maturity traits are ignored.

F/C Feed Conversion, while extremely important in the feedlot, favors higher intake cattle and ADG which again can increase cow size and cow appetite

RADG Residual Average Daily Gain is a feedlot indicator again which looks at how an animal gains compared to its expected intake. Again, it tends to favor higher growth and high intake cattle.

DMI Dry Matter Intake is simply what it states. DMI is an indicator for what an animal will consume daily and unless it is balanced with production can favor inefficient cattle but is an important trait in achieving lower input cattle.

RFI Residual Feed Intake tells you whether an animal has consumed more or less than was needed for maintenance and production. Production is often measured in ADG but there have been several research studies where calves weaning weights are taken and then their mother's, post-weaning, are measured for DMI. This is a stand-alone trait with no correlation to other traits such as frame size, ADG, weaning weights, etc. RFI like DMI; however, does not tell you if an animal is efficient based on input costs vs output values. RFI does allow you to quickly analyze various size cattle, weights, gain, and intake's which would be difficult to do without RFI.

How do we use it? We have taken a system-based approach using RFI, F/C, ADG, and DMI to select bulls we want to be introduced into our feed efficiency program with the cow being our number one goal. These bulls have to be a frame size and phenotype that fit our environment and management; as well as, have a strong maternal background with longevity. Our goal at McDonnell Angus is to manage our cow size as we don't need these western cows any bigger. It is also to reduce our cow intake while still providing cattle that are competitive at the feed bunk, however they need to be profit enhancers on pasture first. We have no interest in high intake, low feed conversion cattle as a standalone selection system. This is a huge industry with lots of different profit centers. I get it, but it all starts with a mother cow and grass and that's why the rest of the industry even exists. So, we need to take care of the cow and ranchers' profitability first to have a strong industry foundation.

We always want a negative RFI bull and will give up around 5% in feed conversion if we can lower our feed intake 10% or more for our cows. Our efficiently sired steers have repeatably proven themselves in the feedlot and we continue to get great reports from our rancher customers on how the daughters have done through the drought and their reduction in feed inputs, with no impact on Weaning weights. In fact, over the years the weaning weights have continued to improve along with the cowherd fertility. So we know it's working.

With 70% of our annual costs on the ranch for feed and pasture and with 70% of that feed being used for maintenance only, it becomes very important to our bottom line to try and improve our efficiencies and net returns on the range and in the feedlot.

**35<sup>TH</sup> ANNUAL  
SALE**

**WEDNESDAY, DECEMBER 4, 2024**

Midland Bull Test Sale Arena • Columbus, MT

**Sale Day Phone 406/ 322-5597 or 406/ 780-0176**

**Lunch 12:00 p.m. MST — Sale 1:00 p.m. MST**

Auctioneer: Joe Goggins and Greg Goggins

- **30 COMING TWO-YEAR-OLD ANGUS BULLS**
- **120 FALL YEARLING ANGUS BULLS**
- **45 REGISTERED ANGUS BRED HEIFERS**

## Accommodations

Super 8 Motel 406/ 322-4101 Columbus  
Big Sky Motel 406/ 322-4111 Columbus

## Health

Health of each herd is excellent. All cattle sold according to State of Montana health regulations. Individual health papers will be furnished for interstate shipment. If your state or province requires additional tests, your purchases will be cared for at buyer's risk and expense until tests are completed. All bulls are BVD-PI tested free. Semen testing is done by Stillwater Vet, Lacey Fahrmeier, ultrasound by Samantha England.

## Trucking

Free delivery on Angus bulls up to 400 miles. \$75 off each bull purchased if you bring your own trailer. Free delivery is not available on the bred heifers, but we can help you with arrangements.

## Wintering Arrangements

Bulls can be left here and wintered. Approximate cost \$3.00/day.

## Terms

Terms, conditions and guarantees herein stated in writing shall constitute a binding contract between buyer and seller. Terms of the sale are cash or check payable at the close of the sale and prior to load-out unless other arrangements have been made with the owner in advance. Animals will be sold to the highest bidder with auctioneer settling dispute as to bid. Announcements at the sale by owner or auctioneer will take precedence over statements in the sale catalog or supplement. Each animal becomes the buyer's risk as soon as it is sold, but will be cared for by the seller until load-out or for a reasonable period of time. Everyone attending the sale does so at their own risk and Midland Bull Test Center, Big Country Breeders, or their agents assume no liability, legal or otherwise, for any accidents which may occur. Except for those specifically herein stated in writing, there are no further warranties or guarantees of any nature, expressed or implied. Retaining 1/3 interest on all the bulls.

## Guarantee

Every animal in this sale is, to the best of our knowledge, free from any disease or defect.

## Mortality Insurance Available through

Devon Murnin 406/ 696-1502

## Genomic Enhanced EPDs

Bulls that have been genomic tested through Angus using Neogen GS test will be marked in catalog EPD's are current as of October 28, 2024.

## First Breeding Season Guarantee

All bulls selling for \$3,000 or more will be covered 50% by seller if they are injured during the first breeding season. Breeding season is defined as the 60 day period following the first turnout of bulls. 50% of the value of the bull up to \$8000 in purchase cost, minus one-half salvage value will be given as credit in a future Beef Country Sale or towards a replacement bull if one of equal quality is available by seller. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2024. This guarantee does not replace mortality insurance and does not cover loss due to death or other natural occurrence or negligence. Mortality insurance is available sale day.

### **THANK YOU FOR SUPPORTING OUR BREEDING PROGRAM AND BULLS.**

#### *Welcome to The Beef Country Genetics Sale*

There is nothing more core to making a ranch profitable and generational over the years than a sound, fertile cow that will stay in the herd and convert grass to pounds weaned in her calf. That coupled with our ability to manage those grasses, and natural resources sum up our greatest opportunities.

These historic markets have sure brightened our industry. We have had a lot of compliments over the last three to four years on our genetics and how the daughters held up during some tough drought conditions. That is the real test, and these proven Efficiency Cattle programs continue to be one of the greatest opportunities to improve our Net Return per acre.

Our cows run in several different environments from North Dakota, Montana, as well as Northwestern Kansas where we moved a herd during the drought three years ago. All of the herds have done well wherever we run them.

We continue to progeny test our efficiency sires and in 2019 we tested steers, all from one herd at Simplot Feeders near Grandview, ID. We tested three of our Efficiency sires against twelve other Angus and Simmental sired steer groups. The top two Efficiency sires were ours, with our top sire, AB Capitalist steers weighing within 10lbs. of the average of all the steers and converting 19.4% better than the other twelve sire groups. In today's world, that is nearly \$180 less feed cost and is consistent with a set of steers we fed in 2021 near North Platte, NE that finished out in June at .88/lb. gain.

The bulls selling are from our herd, including two partnership herds of Steve & Kim Crowe and Marda Angus. Also, MJB Angus will again have a top set of bulls. We continue to partner and share herd bulls with him. Terry & Lavonne Frost of Frosty Creek Angus have a nice set of bulls, many sired by Efficiency sires. Along with Jocko Valley Angus and 406 Ranch.

We also have forty very fancy registered bred Angus heifers.

If you are unable to make it to the sale, the bulls and heifers are available to view at Midland Bull Test. Videos will be on our website [www.mcdonnellbeefcountry.com](http://www.mcdonnellbeefcountry.com). Call us anytime for assistance.

On behalf of Sam and I, we would like to thank everyone for our support.

## Hello Everyone

Here we are in 2024 and the cattle continue to prove their value to us! What a great time to offer from our herd some of the top bulls you will find anywhere. Take a hard look at the 8293 Justified sons that submit low births, high gaining and maternal strengths for exceptional replacement heifers. The Bomber G091 cattle have excelled in our herd, producing us some great replacement females. It is a privilege to offer our bulls with all the results of the RFI testing. Read along, study the genetics in our catalog, along with all the precise numbers available for you to understand everything to own one of the best animals for your herd. We are here to help with any questions and all the answers you will need to insure progress in your own herds.

It is terrific to see mother nature giving us some rain for one of the greenest autumns we have ever had. Raising our cattle in dryland can be a challenge at times but the cows continue to assure us they are as determined to raise the best calves, whether heifer or bulls. We are proud to have you see our 18 month bull offerings at the sale. The bulls once again are finished through the Midland Bull test for relative feed efficiency and are fertility and genomic tested.

We are proud to say our two sons, Trent and Trevor, along with our daughter-in-laws, the grandkids, and even our great grandkids, all have cattle in the Frosty Creek Angus herd. We strive to have cattle that meet all docility traits so we can share safe work days together. We owe our thanks to so many of the family for all the extra hard work and efforts they put out every year towards the cattle. We truly depend on them more and more all the time.

Thanks for coming and attending this great bull sale,

*Terry, LaVonne Frost and all the Family*

## FRONTIER LIVE SALE

This Sale will be broadcast live on [www.frontierlivesale.com](http://www.frontierlivesale.com). To view a sale,  
1. Create an account, if you have already done so skip to next step. To create a new account, click on the word **Registration** in the upper right hand corner. You must fill out the information requested. Then click **Create Account**. An email will be sent to your email account you provided. Please click the link in the email to activate your new account.

2. Once you click the link, your account will now be activated
3. At this point, you may click **Continue To Browse Our Site**. This will allow you to view all upcoming auctions.
4. Once you see the auction you are interested in, click **Get Approved To Bid** for absentee and live bidding.
5. Please enter your information in the form. Depending on the auctioneer, different information may be requested. Click **I agree to sale terms and conditions**. Congratulations! You are now approved for the auction. Now that you're approved you can participate in the auction and bid on its items.
6. Login on sale day with the credentials provided at registration.

Call 866-313-0123 for tech help.

## RFI (Residual Feed Intake) (lbs/day)

The amount of feed intake an animal consumes daily, above or below its maintenance requirements as well as its performance (growth) requirements. A negative RFI is a more efficient bull.

*Example: -2.0 means the bull ate 2 lbs. less feed per day than he needed to meet his body maintenance requirements and production needs (ADG). The difference between a -2.0 and a +2.0 bull is 4 lbs. of Dry Matter Feed/Day.*

If you are keeping replacement females, by selecting for negative RFI, research has shown you have the potential to save close to \$150.00 per year on cow feed & pasture costs.

## UNDERSTANDING EFFICIENCY AND RFI

Historically, the weight of an animal has been the most important component in determining value, which follows closely with production being the most heavily promoted and taught value in agriculture.

However, when you consider that more than 75% of the cost of growing cattle is related to feed inputs, and that 70-75% of the feed consumed by cattle is solely for maintenance requirements, then the importance of improving the efficiency of feed intake becomes very real. With today's feed prices, improving a herd's efficiency of feed utilization is obvious.

## WHAT DOES THE RESEARCH SAY

1. Efficiency is highly related to growth and growth is the traditional method of measuring efficiency. The problem is that using growth alone as a measure of efficiency also increases the size of the animal, which will increase maintenance requirements, which will increase appetite, which will increase the need for available feeds/grasses.
2. Using RFI will lead to improvements in feed efficiency without compounding the need for additional feeds or increasing mature size.
3. RFI allows you to produce at a level that optimizes on one's management and environment instead of stressing it.
4. RFI is a highly heritable trait, meaning that through genetic identification and then selection, one can make rapid improvements.
5. Selecting for efficiency will allow the cattle industry to become more competitive in production with swine and chicken. About 5% of the feed consumed by cattle is converted into protein, while swine and chicken are 14 and 22% respectively.
6. Research has shown there is a 0.90 correlation (very high) between bulls measured for RFI postweaning and how their daughters will perform for efficiency in the cowherd.

## QUESTIONS AND ANSWERS

**What is the heritability of RFI (Residual Feed Intake)?**

0.28-0.40 (Moderately to highly heritable).

**How is RFI calculated?**

Basically RFI is looking at what the feed intake requirements for maintenance are for the individual bulls and then what the feed intake requirements are for production (each individual bull's ADG) and compares that to what the individual bull consumes.

**How much difference can one expect to find in cattle?**

Research from Australia, Canada, and the U.S. have consistently found differences of up to 30%.

**If you have two cows weighing 1300 lbs and one produces 15 pounds of milk and the other 20 pounds of milk, wouldn't the other cow at 15lbs require less feed?**

No, and it could just as well be that the 15 lbs. milk producer is a larger consumer of feed which compounds her inefficiency on both feed intake and lower production. That's the importance of measuring RFI. This is a case where size doesn't matter.

**What should one be aware of when using RFI?**

First and most importantly, RFI needs to be balanced with production and profitability. A negative RFI like a negative DMI with low production is no more cost efficient than the high production with a positive RFI. You need to balance RFI with production, feed conversion, and DMI.

**Why can't we just use our eye and pick the more moderate, easy-fleshing cow?**

Don't confuse size or fleshing ease with efficient productive cattle. Contrary to what some folks believe, RFI is not related to frame size, body type, or body condition. You'll find as many inefficient cows in any frame size and just because they look fat it doesn't mean they're efficient. A fat cow that is high intake with a 400 lbs calf is not going to generate much profit.

# READING PERFORMANCE INFORMATION

EPDs are current as October 28, 2024.  
Updated EPDs can be viewed at [www.Angus.org](http://www.Angus.org)

Expected Progeny Difference (EPD) is the estimate of how future progeny of each sire are expected to perform in each of the traits listed.

**Calving Ease Direct (CED)** - is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)** - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)** - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)** - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Milk EPD (Milk)** - is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Marbling EPD (Marb)** - expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (REA)** - expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**RFI & DMI EPD** - calculated by Vytelle

*Index values are expressed in dollars per head*

**Maternal Weaned Calf Value (\$M)** predicts profitability differences from conception to weaning. Traits included: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

**Weaned Calf Value (\$W)** is the expected average difference in future progeny performance for preweaning merit and includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

**Feedlot Value (\$F)** is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

**Grid Value (\$G)** is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)** is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

**Combined Value (\$C)**, an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace

20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

*We continue to believe that feed efficiency "in the cow herd and in the feedlot" offer the greatest opportunity for the cattle industry.*

*Basically, it never has been selected for so, rapid improvements can be made.*

*Still important that the cattle fit the environment.*

*Discipline. Maternal Efficiency to me includes fertility-longevity-structure-problem free, udders, and teats-and efficiency in production. With 70% of feed going to just maintenance requirements and half a cows life spent in a non-production phase, there are huge economic gains to be made here.*

*Look at the lbs./acre or unit along with the net return on investment and not just lbs. weaned/cow.*

# HEIFER REFERENCE SIRE

## REGISTERED ANGUS BRED HEIFERS

We are offering all of our 2024 Montana Replacement Bred Heifers. Heifers were pregnancy tested by Dr. Liam Robinson in August and will be pregnancy tested again on December 2nd by Lacey Fahrmeier prior to the sale. The heifers have been poured and had Vira Shield 5L and will receive Scourguard shot on December 2nd.

### REFERENCE & AI SIRE

Semen Sales leased to Breeder Link  
 Phone number 208-681-9711

Owned with MJB Angus & WEBO Angus

Top 3% of Vytelle/Growsafe database for RFI efficiency. Effective was one of our high efficiency bulls in our 2018 test. His sons and daughters have impressive phenotypes. His daughters have beautiful udders with small teats. He is in the top 15% of all Angus for combined foot score, top 10% marbling, and top 10% for \$C.

One of the high selling and high efficiency bulls sold in the 2023 Bulls of the Bighorn sale.

"If you get a 20% improvement in feed efficiency across the board by utilizing this technology and consider a five hundred dollar average feed cost per cow, which we see in the industry in a lot of places, then if you save 20%, that's one hundred dollars that you're saving per cow that goes back into your pocket," explains Tommy Perkins Ph.D., PAS of West Texas A&M University and a member of the GrowSafe Strategic Advisory Committee as he discusses the use of feed efficient genetics to manage and reduce input costs. Feed Efficiency doesn't have anything to do with frame size. Today our feed and pasture costs are much higher. "

- Tommy Perkins

Pasture bred to Clean up bulls. Pregnancy tested to calve 3/3/25

## What are the benefits of selecting for low residual feed intake (RFI) animals\*

- Reduction of overall feed intake by up to 20% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 15-20%
- Improvements in the feed conversion rates of calves of from 15-20%
- 28-40% Heritability which is high in production traits.
- 90% correlation between how a tested bull does and how his daughters do.
- Independent trait with no correlation to other traits such as fertility, milkability, performance, frame size, feet, body condition, etc. — which means you can select for this trait without having a negative impact on other traits.
- Efficiency benefits are found both in cow herd and in the feedlot.
- There is a potential to improve efficiency up to 20-25%.
- Feed & grass costs are the #1 expense in raising cattle, after fixed costs.
- 70% of feed is used just for maintenance – improving feed efficiency can have a big economic impact.

"Few management techniques can be offered to beef producers that yield a 10 to 15% improvement in production efficiency. By stacking generations selected for RFI improvement, greater than 20% in production efficiency can be achieved."

- Dr Monty Kerley  
University of Missouri

# Enriched Ag

**Optimize Management. Build Resilience.  
Enhance Conservation. Increase Profits.**

Enriched Ag's IQ-Ag ranching solutions have become an important part of improving grazing management, conservation, and the bottom line for McDonnell Angus and its customers.

**"In 2021, I was invited to sit on the Advisory Board to help develop Enriched Ag. This company's integrated approach to data and technology at the ranch level positions the producer to not only take advantage of increased production and efficiency but also creates new revenue opportunities for the rancher."**

**- Leo McDonnell**

Using the IQ-Ag tools allows ranchers to verify, validate, and ultimately value the outcomes of their management. Use these tools to assist with marketing opportunities to fit your ranching needs.

## **LOW-TOUCH INSIGHTS FOR RANCHERS - TRY THE FREE VERSION ONLINE!**

### **Forage Biomass Prediction**

Satellite data to measure pasture-specific forage production today and into the future

### **Forage Allocation**

Predicted herd grazing days, as well as pasture rest day and optimal recovery tracking

### **Drought**

Track and predict drought status at your ranch

### **Precipitation**

Historical, actual, and predicted rainfall for your ranch

### **Bare Ground Coverage**

Historical and current bare ground, over-grazed, and under-grazed areas for your ranch

### **Carbon Insights**

Compare the carbon storage potential, carbon pricing information, and forecasts

## **Enriched Ag's IQ-Ag product line also includes hardware options.**

The **IQ-Ag Camera** gathers imagery from your ranch vehicle. Machine learning helps ranchers identify and quantify biodiversity, shrub cover, bare ground, and more.

**Real-Time Ranching** is an all-inclusive system for ranchers to view their insights, improve safety, and make data-driven decisions in real time.

**More about Enriched Ag: (406) 318-9631 or [www.enriched.ag](http://www.enriched.ag)**

# NEW GENERATION OF PERFORMANCE

We have maxed out what mother nature will allow us in weaning weights in these drier, short grass environments without heavy supplementation.

The next big advance in profitability on the ranch will be the introduction of efficiency genetics that allow a 20- 30% reduction in feed/grass inputs while still maintaining, or even increasing the same production level as one looks at pounds per unit produced.

## McDONNELL ANGUS

### BEEF COUNTRY GENETICS

*The Efficiency Breeders*

**ADG** - Average Daily Gain  
**DMI** - Dry Matter Intake  
**RFI** - Residual Feed Intake

*It is important you only compare bulls within groups as rations vary and so does weather.  
 Fall bulls were tested this summer for intake.  
 There are 2 different test groups represented in the 2-year-old bulls and also in the fall bulls.  
 RFI are just within each group.*

*Important to note that RFI is an Index with half being over and half being under.  
 No doubt, if these bulls would have been tested against other Angus herds, they would have all been negative RFI.  
 These bulls were fed a high roughage ration of 38% MegaCal's, so don't expect a lot of 4lb. feed conversion cattle.*

### MISSION STATEMENT

*To serve our customers by being a leader in providing genetics that are economically relevant and offer the greatest enhancement to the overall profitability of their cowherd.*

# DEDICATED. COMMITTED.

WHOLE HERD REPORTING WITH MATERNALPLUS

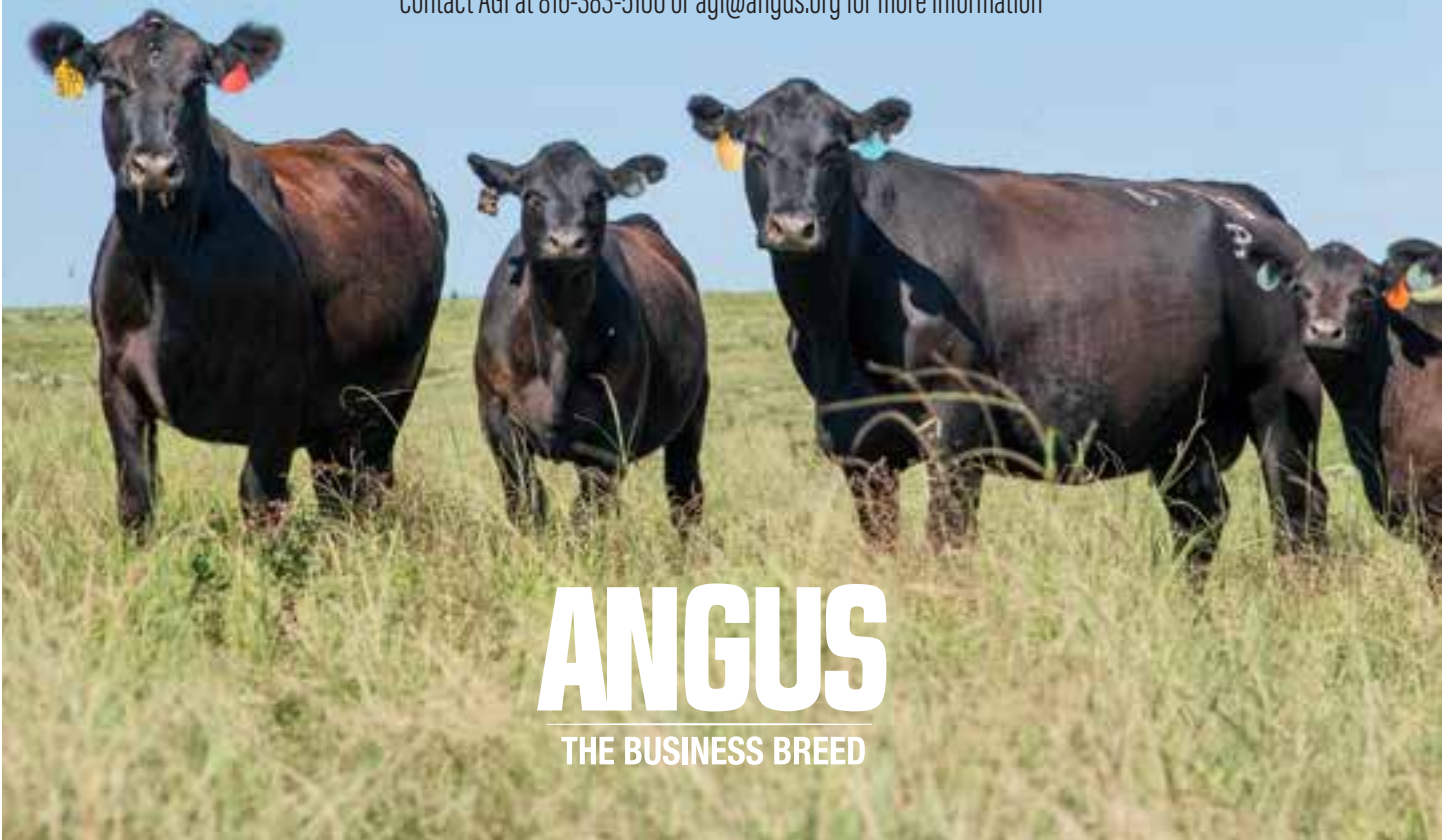

## DEDICATED TO DATA.

Dedicated to Data. We devote extra time to collect maternal traits beyond those required to target greater performance and predictability. Our goal is to not only to improve our genetics today, but also prepare for the future of the Angus breed.

## COMMITTED TO IMPROVEMENT.

Raising quality registered Angus cattle takes commitment. As your genetic supplier, we take that seriously. That is why we believe a commitment to the female starts with Maternal Plus.

Contact AGI at 816-383-5100 or [agi@angus.org](mailto:agi@angus.org) for more information

"We also continue to believe and become more convinced every year that breeding true efficiency, backed by large, collected data sets for intake, offer the industry the greatest opportunity to change and improve the profitability of our business. Environments will only allow for so much weaning weight to be expressed with changes in management or additional supplementations. That is why we put so much emphasis on RFI and on maternal production and longevity. With disciplined selection it has been proven numerous times and in multiple countries that one can reduce grass and hay consumption by up to 20% without effecting weaning weights."

- Leo McDonnell
